

Cisco CCDE Practical Lab Boot Camps

Prerequisites

There are no formal prerequisites for CCDE certification; other professional certifications or training courses are not required. It is expected that the candidate will have an in-depth understanding of the topics in the exam blueprints, a minimum of seven years job experience and a thorough understanding of networking infrastructure principles.

Candidates Should Have:

- ✔ A minimum of seven years job experience in network engineering
- ✔ A thorough understanding of networking infrastructure principles
- ✔ An in-depth understanding of the topics in the exam blueprints
- ✔ have a determined attitude, patience and strong will.

There are many books that are recommended for the CCDE exam (both written and lab). Only a few of them however are really focusing on what is required for the exam. Every student who registers for any CCDE training course with us will receive a free recommended booklist and a link-list.

Course Details

- ✔ Scenario based (similar to the exam) with little theory involved
- ✔ Start by reading and understanding the customer requirements
- ✔ Scenario "evolves" with email chains and other new documents and requirements
- ✔ Answer multiple-choice questions
- ✔ Free-Text answers
- ✔ Draw network designs and diagrams
- ✔ Answers will be validated by a certified CCDE Instructor
- ✔ Discuss the possibilities in groups of equally prepared/experienced students
- ✔ Learn to produce adequate commercial design solutions as opposed to pure technical solutions
- ✔ Technologies include all common Routing Protocols, Tunneling, MPLS, Security, QoS, Management and others

The goal of the training is not so much to get the single right answer – but to know WHY any one answer is "the best". (Please remember – in the real exam most answers seem somewhat correct). It is about what is important and how to analyse the questions/documents/emails/requirements to get to the right answer.

Benefits

- ✔ Acquire an analytical thinking approach at CCDE / CTO level
- ✔ The exam is not about pure technical knowledge – it is about analytical thinking – this is what we will teach our students, however a broad-based thorough technical background is assumed (Written exam passed or equivalent experience.)
- ✔ Get to know the exam structure
- ✔ Manage your time (during the training the group will work on 30 to 50 questions every single day – including discussions – the 1 day practical exam is approximately 180 questions)
